

1. INTRODUCTION

Project Title: AutoMeet - AI-Powered Meeting Scheduler

Problem: Manual meeting scheduling and note-taking is time-consuming. People waste time coordinating schedules, sending invites, and writing meeting summaries.

Purpose: Automate meeting scheduling, invitations, and post-meeting summaries using AI.

Target Users: Professionals, students, managers, freelancers.

Why AI? AI can extract key points, decisions, and action items from meeting notes automatically - something traditional systems cannot do.

2. TECHNOLOGY STACK

Component	Technology
Frontend	React.js
Backend	Express.js (TypeScript)
AI Model	Groq API (llama-3.3-70b-versatile)
Calendar	Google Calendar API
Email	Gmail API
Auth	Google OAuth 2.0

API Authentication: API key passed in headers as `Bearer {GROQ_API_KEY}`

3. SYSTEM ARCHITECTURE

User → React Form → Backend API → Groq/Google APIs → Output Display

Components:

User Input: 5-field form (topic, date, time, emails, organizer)

Backend: Express.js handles API requests

Prompt Module: Builds prompt for AI

AI/API: Groq generates summaries, Google creates calendar events

Output: Dashboard shows meetings, summary page displays AI results

4. PROMPT ENGINEERING

Prompt Template:

You are an AI meeting assistant. Analyze notes from "{topic}" meeting.

Attendees: {emails}

Notes: {notes}

Return JSON with:

```
{  
  "key_points": [...],  
  "decisions": [...],  
  "action_items": [{"task": "", "assignee": "", "deadline": ""}],  
  "follow_up": [...]  
}
```

5. WORKFLOW

Step-by-Step Process:

1. User fills 5-field form → Clicks Schedule
2. Backend creates Google Calendar event + Meet link
3. Emails sent to all attendees
4. Meeting saved to localStorage
5. After meeting, user uploads notes
6. Backend sends notes to Groq API
7. Groq returns structured JSON summary
8. Summary emailed to all attendees
9. Summary displayed on dashboard

6. DEMONSTRATION

Example 1 - Schedule Meeting:

Input: Topic "Project Review", Date April 15, Time 2PM, Emails: ali@gmail.com

Output: Calendar event created, Meet link generated, Email sent

Example 2 - Generate Summary:

Input Notes: "Ali will complete design by Friday. Sara will test by Monday."

AI Output: Action items extracted with assignees and deadlines

7. LIMITATIONS & FUTURE WORK

Limitations	Future Improvements
1 person voice transcription	Add Web Speech API
Local storage only	Use cloud database
No recurring meetings	Add recurring option
